

2019 EMPLOYMENT CHARACTERISTICS

HAWAI'I NURSING WORKFORCE SUPPLY

From infancy to end-of-life, patients across the islands receive health care in a variety of settings including providers' offices, community health centers, hospitals, and their own homes. Nurses are crucial members of health care delivery teams in all of these settings.

By knowing where our nurses are working and the specialized competencies they possess, we can work to ensure that all patients have equitable access to the health care they need to promote their health and wellbeing across the lifespan.
